

MC200 Time & Temperature Heating Control

7 Day Timeclock

Temperature control

Manual Summer Fan

Frost Protection

Security Coding

Heater Reset Facility

Optimisation

“Taylor” made solutions from the company with the know - how

Overview

The MC200 is a digital, high specification controller for individual heaters that provides the flexibility of variable time and temperature control as well as optimised start/stop prediction. Adjustable frost protection, remote burner reset and summer fan-only operation are also included.

Product Features

One of the key energy-saving features of the MC200 is it's ability to set a variety of time and temperature programs, including optimum start configuration. By monitoring the previous performance of the heater and taking account of ambient temperatures, the MC200 can determine the optimum time to turn the heating on. 'Optimum stop' can be configured to save energy at the end of the heating period.

Specification

- 7 Day Time & Temperature control
- Password Protected
- Simple to use controls
- Instant Temperature Adjustment
- Manufactured in the UK
- Remote sensor option available
- Door switch option(s) available
